

The Renewable Plastics Report

RNG Plastics · True Sustainability

- Make the right choice •
- “Tesla-style recycling solution?” •
- RNG Plastic is carbon-neutral •

The Choice Is Yours

Why RNG Plastics Work

Less than 10% of "manually recycled plastics" are recycled—but 80%+ of RNG Plastics are!

- No misleading chasing arrows.
- Recovered at EPA regulated landfills.
- Recyclable for centuries to come.
- All RNG Plastic containers are recyclable.
- All contaminated plastics (about 90%) are recyclable.

Why Recycling Does Not Work

The Boston Globe says it all. The recycling trade and governments are misleading consumers:

- Chasing arrows mislead consumers.
- It's called “wish cycling” in the trade.
- It can only be recycled a couple of times.
- Only containers with lids are recyclable.
- Contaminated plastics (about 90%) are not recyclable.

According to polymer and chemical engineers and scientists who support the RNG Plastic technology, "RNG Plastic is a responsible recycling solution is today." Costs less too.

[See how the RNG Plastic process works...](#)

According to Scott Cassel, CEO of Product Stewardship Institute, "The flexible package industry, they have a responsibility to find out how to recycle it."

Industry News and Trends

News Alert: Does chemical recycling need a Tesla-style success story?

This sends the clear message that chemical recyclers are stumped. They can only trumpet more of the "same 'old stuff" year after year. The permanent carbon-neutral solution is in the next article!

RNG Is Carbon-Neutral, Replaces Coal and Fossil Fuels

Due to affordability, cleanliness, and reliability, RNG is an attractive option to replace coal and fossil fuels. It can power homes, businesses, and vehicles with the benefit of being carbon-negative — removing more emissions than it generates. It can

even be used to **make high quality virgin plastic resin!**

RNG Plastics play an important role in the future of mankind and planet earth!
