

Landfill-Safe™ Products You Can Trust

- ***Landfill-Safe*** is better than compostable, fossil fuel plastics, or paper •
- While methane seeps out of landfills - ***RNG Plastics*** do not •
- Vision RNG turns trash into treasure with 3 new RNG plants •

RNG Plastics Transform Fossil Fuel Plastics into Renewable Products

Choose RNG Plastics - the Sustainable Solution

- Achieves an impressive 85% recycling rate.
- Landfill recyclability leaves zero waste residue.
- Superior performance without the drawbacks of microplastic or GhG.
- Cost savings at 50% less than compostables™ and paper.

RNG Plastics - the Ethical Choice

- Food and dirt-contaminated plastics are acceptable, simplifying disposal for consumers.
- Seamlessly integrates with existing waste

infrastructure, ensuring proper recycling through EPA-regulated landfill practices (LMOP).

- Transforms waste into renewable biogas or RNG, maintaining a closed-loop cycle with the original feedstock.

Embrace the Future - Choose RNG Plastics

- By 2050 RNG replaces all fossil fuel feedstock, paving the way for a sustainable tomorrow.
- Ensures long-term stability of landfills for centuries to come.
- Transforms EPA regulated in Material Recovery Centers, optimizing resources utilization.

CNN Report - Methane Seeping From Landfills

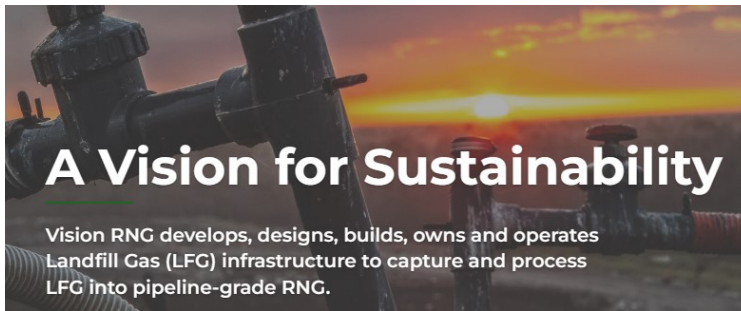

Contrary to CNN's Report: No Methane Escapes from RNG Plastics

While the CNN news report highlights **methane emissions from bioplastics and paper products**, it fails to acknowledge that RNG Plastics, being landfill-safe, do not contribute to such releases. In fact, it prevents the release instead!

Unlike other materials, RNG Plastics boast a landfill recycling rate exceeding 85%, ensuring minimal environmental impact.

Vision RNG Turns Trash into Treasure

Vision RNG Plans 3 Landfill Gas-to-RNG Facilities | Biomass Magazine

The construction of three new RNG plants at landfills showcases the growing trend towards sustainable waste management.

Vision RNG, a leader in this field, is spearheading this expansion in Georgia and Tennessee. Landfills naturally produce landfill gas (LFG aka methane) as organic waste decomposes. Vision RNG captures the gas, preventing its escape, and transforming it into a valuable clean natural resource, RNG. [Read more...](#)
