Alignment with the EPA's Goals and the New 2025 Administration

Exciting News for America

RNG Plastics align seamlessly with the EPA's goals and the anticipated initiatives of the new 2025 administration. Nationwide adoption is underway!

The RNG Plastic solution is emerging as a **pro-choice alternative** to current mechanical recycling, which many consider outdated, inefficient, and environmentally problematic.

Embraced by Government, Manufacturers, the Food and Medical Trade:

- **Reduces Government Spending:** Lower taxes, higher profits for LMOP partners.
- **Enhances Energy Independence:** Renewable energy instead of buried waste.
- **Improves Health and Safety:** No residual microplastic, GhG, waste, or contamination.
- **Environmental Improvement:** Contributes positively to conservation efforts.

Proven Technology:

With our established, robust infrastructure, we leverage technologies that have been successfully implemented for over two decades, ensuring both reliability and efficacy.

Anticipated Support:

We expect enthusiastic support from key federal bodies like the EPA, the Department of Energy (DOE), and Health and Human Services. Pro-choice manufacturers, scientists,

and politicians are already embracing the RNG Plastics alternative.

EPR and DEI Exempt - A Superior Financial Option

RNG Plastics offers an empowering choice in comparison to various state EPR laws, which often lead to increased costs for consumers. The technology is not only an exemption but provides potential **savings of \$0.05 to \$0.15 per pound**.

Conclusion:

In a world where environmental and economic responsibility are paramount, RNG Plastics is leading the change. Stay tuned for more updates as we continue to make strides towards a sustainable, healthier future for all Americans.

Americans Want Clean Energy - Landfills RNG Production is FREE!

Americans Want a Clean Energy Transition - Business Wants it to be Turnkey

RNG Is KEY! Elon Musk says solar energy can power the entire U.S. energy needs. We see that - but the technology is still in the distant future.

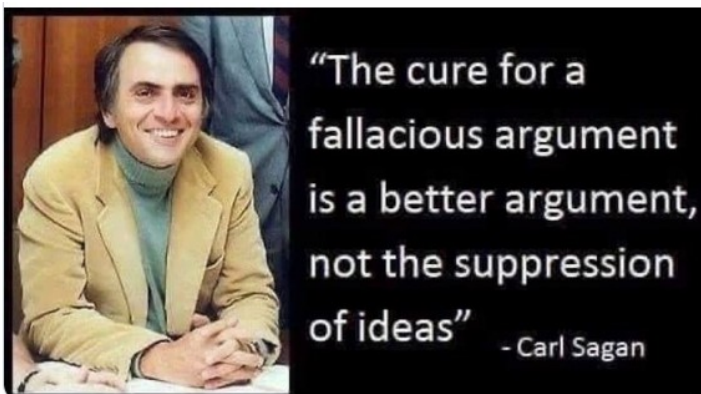

In the meantime, a clean energy transition is needed. For vehicles, rocket ships, enormous ocean liners? The obvious solution for the future is *Renewable Natural Gas*.

Why the Recycling Argument Does Not Work

After Years of Misleading the Public on Recyclability, Action Is Needed

The state of California is suing plastic manufacturers at will.

All those suits can go away if the manufacturers dared to open their eyes and see the solution right in front of them.

The better argument is:

The EPA's LMOP landfill recovery centers and RNG Plastics' technology makes fossil fuel plastics 100% recyclable, and leaves behind no waste, microplastic, or greenhouse gas.
